ITM 500 – Assignment 1

Overview

You will write SQL queries using the provided **Assignment1 datascript.sql** which populates the base of your database including 4 tables : Actor, director, movie and roles.
You must first run the script to create and populate the database, then write queries that answer the questions in **Assignment1Queries.sql**.

Submission

Submit your file package containing:

- Assignment1Queries.sql renamed in the format of your lastname-Assignment1Queries.sql

-Screenshots with correct naming of the tables (3 images)

Follow the instructions below:

Step 1 – Create the Database (Run Assignment1 datascript.sql)

OPTION A)

1. Open **SQL Server Management Studio (SSMS)**
2. Go to File -> Open -> File
3. Find Assignment1 datascript.sql in the location you downloaded it
4. Open Assignment1 datascript.sql
5. Click **Execute**

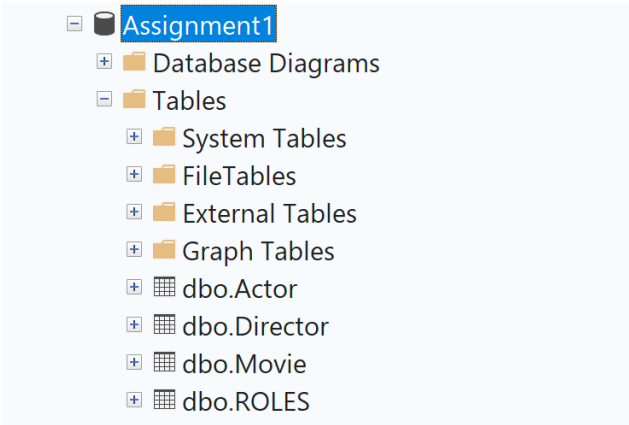
OPTION B)

1. Open **SQL Server Management Studio (SSMS)**
2. Click **New Query**
3. Open Assignment1 datascript.sql
4. Copy and paste it into the query window
5. Click **Execute**

The script automatically:

- creates the database **Assignment1**
- creates all required tables
- inserts base test data

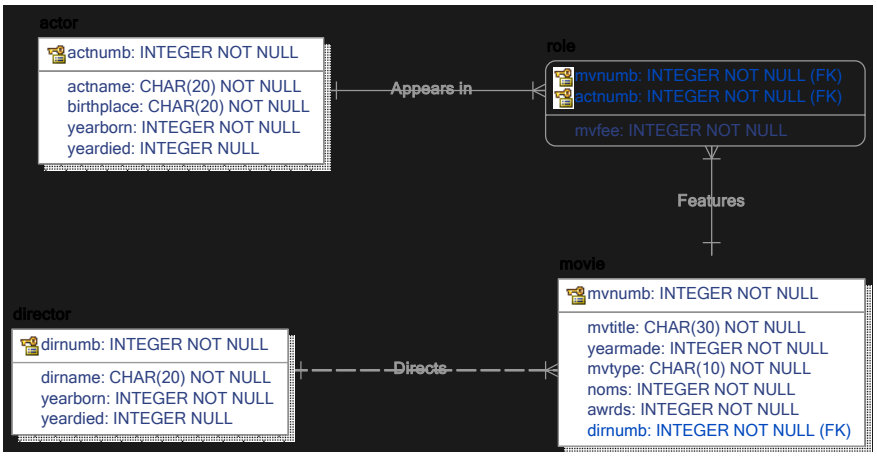
After running it, refresh Databases in SSMS and confirm you see:



If you still do not see the **Assignment1 database,** try quitting SSMS and running it again or disconnect your server and connect again.

Step 2 – Understand Table Structure

Below you can see the ERD of the database:

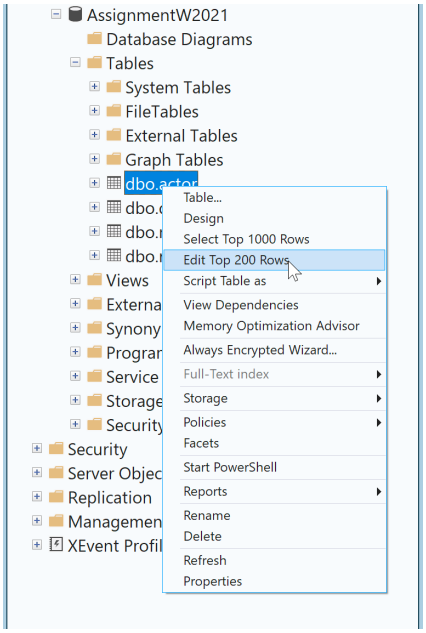


Step 3 – Add Your Own Data

You must add **additional records** to **Actor, Director and Movie table**. You must add at least **5 new rows per table.**

You can use the hints inside the tables e.g. high fee actor or ignore them to enter your own data.

- Right click on each table → Edit Top 200 Rows.



Add your data to each of the tables:

Note: The accuracy of the data you populate does not mater!

	actnum	actname	birthplace	yearborn	yeardied
	1	Nicole Kidm...	Honolulu ...	1967	NULL
	2	Leonardo Di...	Los Angeles ...	1974	NULL
	3	Meryl Streep...	New Jersey ...	1949	NULL
	4	Tom Hanks ...	California ...	1956	NULL
	5	Scarlett Joha...	New York ...	1984	NULL
	101		Toronto ...	1975	NULL
	102	Comedy Act...	Vancouver ...	1980	NULL
	103	Two Roles 2...	Calgary ...	1990	NULL
	104	Support Act...	Ottawa ...	1985	NULL
*	NULL	NULL	NULL	NULL	NULL

Step 4 – Screenshot Requirement (Mandatory)

You must submit **3 screenshots**, one for each table:

- Actor table
- Director table
- Movie table

Each screenshot must clearly show:

- table name
- full rows
- the new records you added

Step 5 – Write Queries

Open **Assignment1Queries.sql** and write SQL statements that answer each question.

Your queries must:

- run without errors
- return correct results
- include only required columns

Important Notes

- The base dataset was designed so all questions return results.
- If your query returns zero rows, your SQL logic is likely incorrect.
- Test every query before submitting.
- Partial submissions e.g. missing the screenshots will lose marks for incompletion.
